

# Resizing Images

Projected images for club events and most salons need to “**fit within the dimensions**” 1024 pixels wide (long side) x 768 pixels tall (short side) and be .jpg files.

This matches the format of the data projector.

In other words you need to:

- Set all wide or “landscape” format images to 1024 pixels wide.
- Set all tall or “portrait” format images to 1024 pixels high.

Don't try to set both height and width as this may distort your image, set only the long side of your images depending on the format of your images.

For Images Photography Group we are not that fussy so just make the longest side 1024 pixels and we will be happy. Thank you

**Warning :** Do not change the size of your original image. Save ( save as ) or export a second copy of the image first for club and then resize that one only.
